

Harbor Management Plan Update - Public Comment Matrix
June 28, 2018
ELR

#	Date of Comment	Comment	Date of Response	Response	Final Review
1	6/14/2018	I have attached some input to additions to the HMP. It is very basic/broad. I felt detail could be added if desired and if the concepts were adopted. The document I was working from (the existing HMP from the website seemed to have less in it that I remembered) I have to develop and teach a course out of the US next month so I just don't know about my availability for some of the meetings. In any case, if this could be reviewed at the Harbors' meeting that has the HMP on the agenda, I would appreciate it.			
2	6/23/2018	This document was just released to us by NOAA. It has very good information on some of the restoration concepts I had submitted. I did work on coal fly ash which is mentioned in here when I worked at a coal fired electricity plant, but I think there are more readily available materials.			
3	6/26/2018	In any case, here is an article on the balance between aquaculture and other uses. It's a quick read.			
4	6/29/2018	Aquaculture pictures			
5	7/9/2018	Pictures of thoroughfare silting in.			
6	8/9/2018	It would be very helpful to install a floating dock near the launching ramp so that a boater could tie up while he moves his car and trailer from the launching ramp. Thank you, John O'Mara ,1236 Corn Neck Rd., P O Box 1013 Block Island.			
7	8/29/2018	A different engineering services model would probably help make this possible. The current one is lacking in my opinion. It seems only when it results in grant funds or similar, is attention given. I would like to be included as conceptual review.			
8	8/29/2018	Add the following goal to Water Use and Classification: It is a goal of the Harbor Management Plan that plans and practices are put into effect with the goal of New Harbor waters being classified "Open" throughout the year.
